and that persists for an extended period, typically decades or longer. Weather and climate: Weather is the set of meteorological conditions such as wind, rain, snow, sunshine, temperature, etc. at a particular time and place. Wed, 05 Dec 2018 07:34:00 GMT Climate Change & Agriculture - English - 20 November 2018 - This report examines the risks associated with the release of excessive nitrogen into the environment (climate change, depletion of the ozone layer, air pollution, water pollution, loss of biodiversity, deterioration of soil quality). Climate change - OECD - 1. Introduction. Reducing risks to food security from climate change is one of the major challenges of the 21st century. The impacts of climate change on crop yield can already be detected in observed data (Lobell et al., 2011). Climate impact studies on crops predominate, but impacts on fisheries and livestock production are no less serious (Creighton et al., 2015, Herrero et al., 2015). Reducing risks to food security from climate change ... -
