It is measured by assessing the patterns of variation in temperature, humidity, atmospheric pressure, wind, precipitation, atmospheric particle count and other meteorological variables in a given region over long periods of time. Climate differs from weather, in that weather only describes the short-term conditions of these ... surface can be directly observed in detail from the Earth with help from a telescope.. Although Mars is smaller than the Earth, at 11% of Earth's mass, and 50% farther from the Sun than the Earth, its climate has important similarities, such as the ... Fri, 07 Dec 2018 04:04:00 GMT Our Chaotic Climate System Â« Roy Spencer, PhD - by Nic Lewis. Emergent constraints on climate sensitivity: their nature and assessment of validity. There have been quite a number of papers

published in recent years concerning â€œemergent constraintsâ€• on equilibrium climate sensitivity (ECS) in comprehensive global climate models (GCMs), of both the current (CMIP5) and previous (CMIP3) generations. Two-thirds of Republicans (67%) say either that the Earth is getting warmer mostly because of natural changes in the atmosphere (43%) or that there is no solid

evidence the Earth is getting warmer (24%).
